

LEFT HAND COUPLER

APPLICATIONS

- Wells with steel sucker rods
- Wells with high solids environment potential for stuck pumps

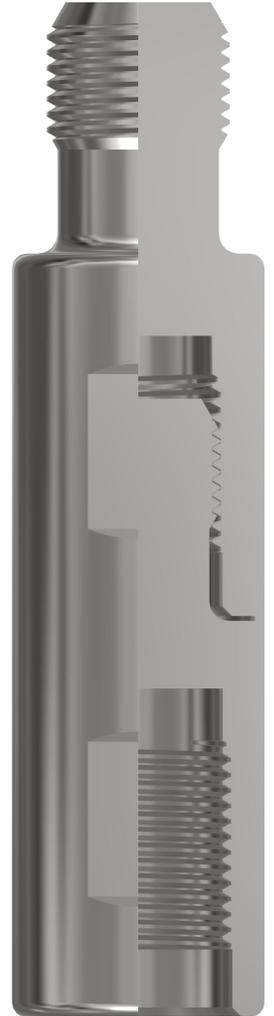

BENEFITS & FEATURES

- Disconnect rod string at pre-set location
- Minimizes wet string pull jobs when the pump is stuck
- Enables easy retrieval of rod string
- Available with 3/4-in and 7/8-in sucker rod pins
- Available in 316 SS and Brass for high corrosion resistance.

The Ellis Left Hand Coupler is run above the pump to enable easy retrieval of the rod string. Ellis Left Hand Coupler is used with steel sucker rods to retrieve the rod string in case of a stuck pump preventing costly fishing jobs. The rod string is turned to the right while engaging the clutch on the pump to disconnect the Left Hand Coupler.

Ellis Left Hand Coupler is assembled and torqued to API 11B specification at the manufacturing facility making it ready to use immediately.

High quality machining processes adopted at Ellis Manufacturing allows us to maintain extremely close tolerances and produce components with smooth surface finishes and chatter free threads.

SPECIFICATIONS

SIZE [in.]	OD [in.]	PART NUMBER	MATERIAL
3/4	1.625	3/4 LH	ALLOY STEEL
		3/4 LH B	BRASS
		3/4 LH SS	316 STAINLESS STEEL
7/8	1.625	7/8 LH	ALLOY STEEL
		7/8 LH B	BRASS
		7/8 LH SS	316 STAINLESS STEEL
